2) A and B together can finish a job in 8 days. A alone can finish a job in 12 days. How   many days will it take B alone to do the same job?

a)20 days   b)24 days   c)18   d)16 days

Ans:b)24 days

METHOD -1 Basic

Speed of A+B = 1/8

Speed of A = 1/12

Speed of B = 1/8 - 1/12 = (3-2)/24 = 1/24 = 1/24

A & B together will complete the same job in 24 days

3) A can finish a work in 18 days and B can do the same work in 15 days. B worked for 10 days and left the job. In how many days, A alone can finish the remaining work?

a)5   b)5 ½   c)6   d)8

Ans:c)6 days

EXPLANATION (Basic)

We know that A can complete a task in 18 days.
So one day work of A,=1/18
=1/18
B can do the identical task in 15 days. So one day work of B,=1/15
=1/15
B quit her job after 10 days on the job. So 10 days work of B,=(1/15×10)
=1/15×10=2/3
=2/3
Whole work can be considered as 1. So, the remaining work=(1−2/3)
=1-2/3
=1/3
=1/3 Thus, the number of days in which 1/3 work is done by A=(18×1/3)
=18×1/3=6 days
=6   days
So, A can finish the remaining work in 6 days.
Hence, the correct option is 3.

EXPLANATION(short cut)

                               90

B----☐ 15   6

B's one daywork =6 units

B's 10 days work =6x10 =60 units

Work left 90-60=30 units

A's one daywork =5 units

A does 30/5=6 units

4)A does 80% of the work in 20 days. He then calls B and they together finish the remaining work in 3 days. How long B alone would take to do the whole work?

a)23 days   b)37 days   c)37.5   d)40 days

Ans:c)37.5

EXPLANATION

METHOD – 1 basic

Suppose, there are 100 units of work to be completed.

'A' completes 80% of the work, that is, 80 units of work in 20 days.

A's efficiency = 80/20 = 4 units of work per day

Total time taken by 'A' to complete 100 units of work = 100 / 4 = 25 days

If 'A' was to work alone, it would take him 25 days to complete 100 units of work (4 units per day).

IT Support and Development Training Programme
Creating Employable Engineers and Entrepreneurs

But 'B' pitches in and they complete the remaining 20 units of work in 3 days.

'A' would have worked on his normal efficiency, finishing 12 units of work (4 units per day) in 3 days.

So, remaining 8 units of work would have been completed by 'B' in 3 days.

B's efficiency = 8/3 units of work per day

Total time taken by 'B' to complete 100 units of work = 100 x 3/8 = 37.5 days

METHOD – 2 (short cut)

A---- 80%== 20

13) Initial A and B together can do a piece of work in 30 days. A having worked for 16 days, B finishes the remaining work alone in 44 days. In how many days shall B finish the whole work alone?

a)20 days   b)60   c)50 days   d)100 days

Ans:b)60

EXPLANATION (short cut)

Total work = efficiency * no.of days

(A+B) * 30 = A * 16 + B * 44

30A - 16A = 44B - 30B

A/B =1/1

Substitute this efficiency values either (A+B) * 30 or (A * 16 + B * 44) for finding total work

18) A alone can do a piece of work in 6 days and B alone in 8 days. A and B undertook to do it for Rs. 3200. With the help of C, they completed the work in 3 days. How much is to be paid to C?

a)Rs. 375   b) Rs. 400   c) Rs. 600   d) Rs. 800

Ans:b) Rs. 400

EXPLANATION:

Work done by A in one day = 1/6.

Work done by B in one day = 1/8

 Work done by C in one day = 1/3 - (1/6+1/8)

= 1/3 -7/24

= (8-7)/24 = 1/24.

A's wage : B's wage : C's wage = 1/6 : 1/8 : 1/24 = 4: 3: 1

Therefore, C's share = (1/8) * 3200 = Rs 400.

19) If 6 men and 8 boys can do a piece of work in 10 days while 26 men and 48 boys can do the same in 2 days, the time taken by 15 men and 20 boys in doing the same type of work will be:

a)4 days   b)5 days   c)6 days   d)7 days
Ans:a)4 days

EXPLANATION

Given that
6 men and 8 boys can do a piece of work in 10 days
26 men and 48 boys can do the same in 2 days

As the work done is equal,
10(6M + 8B) = 2(26M + 48B)
60M + 80B = 52M + 96B
=> M = 2B
=> B = M/2 ......(1)

Now Put (1) in 15M + 20B
=> 15M + 10M = 25M
Now, 6M + 8B in 10 days
=> (6M + 4M) 10 = 100M
Then D(25M) = 100M

=> D = 4 days.

21) Avinash, Bhuvnesh and Chaman can complete a piece of work in 20, 30 and 60 days respectively. In how many days can Avinash complete the work if he is assisted by Bhuvnesh and Chaman on every third day?

   a) 15   b) 18   c) 16   d) 12

   Ans: a) 15

EXPLANATION (short cut)

   Calculation:

Days	Total work	Efficiency
Avinash (20)		3
Bhuvnesh (30)	60units	2
Chaman (60)		1
On first day Avinash will work alone and on third day Avinash will work with Bhuvnesh and Chaman.

   Day 1 = Avinash = 3 units

   Day 2 = Avinash = 3 units

   Day 3 = Avinash + Bhuvnesh + Chaman = 3 + 2 + 1 = 6 units

   Hence, Work done in 3 days = 3 + 3 + 6 = 12 units

   $\Rightarrow$ 3 days × 5 = 12 units × 5 $\Rightarrow$ 15 days = 60 units

   ∴ The required no of days required = 15 days
